I have a simple php script that gets a record from the database and then runs json_encode() on it, but it returns this:

```
"{"status":"error","error":"JSON Format Error","message":"Unknown or Invalid JSON"}"
```

Here is the php: I have also tried everything I can think of to see if it's a php problem or a json_encode/mysql_fetch_array problem, but everything I've tried has proven to be faulty. Here is the output from the query in the database: {"StudentID":"1","Name":"Student Name","Grade":"10"}

Here is a link to a fiddle, if anyone could take a look at it that would be amazing: A: Notice your client-side array is named student, not record in your php. \$student = array(); while (\$studentRow = mysql_fetch_array(\$
