* Begin playing at the beginning of the score by transcribing the visual part, after learning what it is all about. (2) Learn the melody. If it's a classical piece, the pianist can take the complete score; if it's a piece from another musical language, the pianist can copy out the melody on the score, and then rewrite it. (3) Begin playing the accompaniment: (a) with the bass lines (written in the right-hand direction), (b) with the chords (written in the right-hand direction), and (c) with the pedal points. (4) Follow the written-out melody with a piano-playing imitation, slowly at first, and then faster, until the pianist has played the entire piece. (5) If the piece is from a different musical language, the pianist must now attempt to write out the melodic lines and the rhythms on the score. First, learn the melodic lines, whether they are in the treble or bass, and then learn the rhythms. Next, note the rhythmic markings; in particular, if a pattern of repeated notes is called for, must be carefully worked out. The pianist must also decide whether the piece is in 4/4 or 3/4 time. If in 4/4 time, the pianist must first write out all the even-numbered notes in the bar. If in 3/4 time, the pianist must first write out the quarter notes, the eighths, and the sixteenths, and then write out the even-numbered notes. If the piece is a Western European song, the pianist must work out the rhythms first on the score, then play the melody, and then try to match the notation to the pitch, by sounding the notes. In all, the pianist has about six weeks, three of which will be spent in learning the music of another musical language, and the rest in transcribing and in practicing the music of the song, and in playing it. Of course, the pianist must learn to make a style, and to play "for the ear." That is, the pianist must make sure that each note fits, 82157476af
